

""Twitter handle (and profile name): MindandCulture (CMAC)

Twitter description: Research center innovating creative solutions for social problems in the mind-culture nexus. Powered by a global network of researchers & cutting-edge tools.

Description of the organization from a third party source: "The Center for Mind and Culture, Inc. (CMAC) is a non-profit organization in Boston, Massachusetts dedicated to non-partisan research. The network of expert researchers at CMAC tackles complex social problems such as illegal child trafficking, religious self-radicalization, proliferation of weapons of mass destruction, social integration of immigrants and refugees, and many other critical issues arising within what we refer to as 'the mind-culture nexus.'"

Headings: The Center for Mind and Culture (CMAC) is driven by the power of non-traditional, advanced, and analytical tools to build creative solutions to humanity's most complex problems. Our research teams untangle dynamic networks and dig deep under the surface to identify the root causes of these problems.; By the numbers; 76; 48; \$8.4 mil; 42; 123; 35; Our research; Latest updates; Published in

Paragraphs: Join a powerful, global network; Our research teams empower changemakers to create ethical and equitable solutions to the challenges facing their communities; Learn what makes our work unique; CMAC employs advanced research methods and cutting-edge tools to identify the root causes of humanity's most complex problems; Support evidence-based change; Together we can explore the intersection of human minds and dynamic cultures to uncover innovative and practical solutions; CMAC was founded by philosopher and theologian Dr. Wesley J. Wildman and neuroscientist Dr. Patrick McNamara. The intersection of their fields of expertise led to our idea of the mind-culture nexus - the intersection and interaction of individuals with their environments. This nexus encompasses much of the way that people operate within and perceive the world around them.; We draw from a number of disciplines to develop and catalyze research initiatives into the nexus of mind and culture. CMAC is an institutional locus for understanding these phenomena, empowering academic scholarship as well as the public with further knowledge.; Publications and presentations; Media mentions; Awarded grant funding; Research fellows & associates; Sponsored students; Collaborating organizations; 2017-2022; CMAC achieves impact by employing ground-breaking techniques. We deploy technology, grapple with complexity, and incorporate all forms of the relevant expertise in a constant effort to better understand minds and cultures and to better inform the decisions we make in their nexus.; By modeling complex social systems, we predict trends, estimate threats, inform policy, test potential solutions, and ascertain the expected impacts of a changing world. We simulate the patterns of culture and individuals that compose human

society to advance our understanding of the present and envision the possibilities of the future.; These projects apply the latest technologies to education and healing, creating interfaces and tangible experiences for virtual reality and internet-of-things devices. We access the power of an advancing sector to promote equality and inclusiveness, reduce suffering, and enhance our capacity to teach and learn.; We distill insights about the worldviews and individual behaviors that propel both the concords and conflicts within our communities. These projects collect data through surveys, literature reviews, and comprehensive analyses to quantify the values, perceptions and belief systems of the self and the community.; We build databases, review existing academic practices, and facilitate conversations to help academic disciplines make smart decisions about how to direct their research efforts and resources. We create a richer understanding of the boundaries and activities of academic disciplines.

Headings: About; CMAC's theory of change; At our core, CMAC values;; We believe that;; Strategy; CMAC on the Move:

Paragraphs: Traditionally, the sciences and the humanities have operated separately in academic settings. In an evolving and complex world, this division can stall important cooperative multidisciplinary research. The seeming tension between fields is not fundamental or methodological, rather a side effect of institutional habits and compartmentalized thinking.; The Center for Mind and Culture was founded upon the idea that building a bridge between scientific and humanities approaches to studies of complex human behavior could unlock innovative solutions to complex problems. By fostering collaborative research, we demonstrate that adventurously multidisciplinary research is not only possible but essential for a comprehensive understanding of our world.; Originally an engine for studying the biological and cultural behaviors of spirituality and religion, CMAC researchers have pioneered what spirituality means in a variety of cultures and how it helps forge identities and communities. Our research methodology goes beyond traditional boundaries, integrating insights from fields such as cognitive science, anthropology, psychology, philosophy, and history. This interdisciplinary approach allows us to explore the complexities of religious beliefs and practices with depth and breadth.; CMAC has pioneered the use of modeling & simulation to recreate and study religious phenomena, such as secularization, religious extremism and violence, and the neurocomputational study of religious belief. In recent years, we have broadened our horizons to capture the nuances of human behavior outside of religious practice. By expanding our focus, we gain a more comprehensive understanding of the intricate interplay between culture, cognition, and social dynamics. We have worked with subject-matter experts in fields such as mental health, economics, public health, ethics, and data science. Embracing an interdisciplinary approach has allowed us to build psychologically realistic and behaviorally plausible artificial societies. These contain individual agents making everyday decisions that can be studied, and society-wide policy interventions that

can be tested on an experimental platform designed to replicate real-world complexities.; From combatting the exploitation of children in the commercial sex industry to addressing spiraling rural suicide rates and tackling the challenges of political and religious polarization, we're committed to driving positive change. CMAC brings together diverse and even fiercely opposing views to find innovative solutions. By collaborating across the spectrum of political, ideological, and religious diversity, we've discovered that we share more in common than we often realize. Together, we're breaking down barriers and fostering understanding, forging a path towards a better world.; The complex adaptive system of minds in cultures produces unintended consequences, like high rates of suicide in rural areas or the exploitation of children in the commercial sex industry. Though CMAC doesn't specialize in suicide or trafficking, we tackle these kinds of social issues.; Our theory of change is that we can offer innovative solutions by bringing together experts and applying computing and data-science methods to complex social systems.; We use computing and data science to analyze real-world problems and study the impact of potential solutions. This allows us to investigate the system, run cost-benefit analyses on existing policies and potential new interventions, and discover the system's hidden change-levers. These methods are commonly used in science and engineering fields, but when we pair them with the humanities and an understanding of social issues, we have a unique opportunity to pave a new way forward.; Research_x000D_

Summaries of Links: Based on the provided information, it can be inferred that this organization is primarily focused on the study of the relationship between mind, culture, and religion. The organization conducts research and engages in projects that explore topics such as modeling social systems, engaging virtual environments, quantifying identities and ideologies, and charting academic landscapes. The organization also collaborates with other institutions and individuals to further its research and outreach efforts. While the specific nature of the organization's activities and findings cannot be determined from the provided information, it is evident that it is engaged in scholarly research and seeks to contribute to the understanding of the complex interactions between mind, culture, and religion.""
