Headings: Welcome to the world of; Problem Solvers; We have been taught to distrust & hate each other.; left & right; red & blue; Use your power.; The truth is, when we look, we find that we do agree and can solve any problem we face, together.; We CAN find solutions. Together.; Let's solve problems. Together.; Our campaigns; Climate of Unity; Partners of Climate of Unity; The Social Solution; Partners of The social solution; Check out all of our partners; Read our story

Paragraphs: This is the problem. We have been divided into two separate worlds.; Pledge to use your consumer dollars and votes to support problem solving companies and leaders.; It's easier than you may think to motivate an executive or politician to change their way.; In September 2021, we supported Stanford University and NORC in conducting the largest deliberative poll in history - America in One Room: Climate and Energy.; The results were inspiring. Not only do we agree on what the biggest issues are, we can actually find solutions that 70% of us support. Regardless of our political affiliations or where we live, Americans want to solve problems together.; America in One Room: Climate and Energy; When we see our friends, neighbors, and families experiencing wildfires and other extreme weather events, we all want to do something to ensure others don't have to experience the same.; Natural disasters can't see red or blue. Join us and let's work together on solutions that we can all live with.; These are some of the partners working In This Together for a Climate of Unity. We are combining their distinctive powers to get more done together than apart.; On The Social Dilemma we learned about the devastating impact hate baiting media has on our children and society, causing division between us.; We need to re-learn how to connect authentically with each other so that we can make democracy real and start to tackle the biggest challenge - ensuring we have leaders that focus on solving problems rather than polarizing us for profit; These are some of the partners working In This Together on The Social Solution. We are bringing together their specialties so that the whole

is greater than the sum of the parts.; It's time we got together around commonsense solutions.; Get the book authored by our co-founders Trammell S. Crow & Bill Shireman who have laid out the politically incorrect strategy for problem-solving on climate change and much more.; Subscribe today to receive our weekly newsletter 'In Between Times' as well as the occasional organizational communications.; In This Together is a campaign by the Bridge Foundation for Free Speech and Civil Discourse (a registered 501(c)(3) EIN 82-4775384) and Solution Citizen, Inc. (a mission-based C-Corp, EIN 85-1217899) to unite citizens, donors, and NGOs for healthy democratic problem-solving. We partner with and support BridgeUSA (a registered 501(c)(3) EIN 82-3983123) and other NGOs to foster collaboration for a healthy democracy and environment.; Our Privacy Policy; (C) 2020 All rights reservedâ€‹

Headings: FAQs; Learn more about who we are, what we do and our plans for the future in this FAQs section.

Paragraphs: Launched on July 4, 2020, In This Together is a campaign to help save the environment and repair our democracy by growing a diverse bipartisan community of America's silenced majority: common sense problem-solvers who have been marginalized by the politics of fear, anger, and division.; Our Mission is to connect and empower America's silenced majority of 98M-plus, in hope-based campaigns to reclaim democracy, end toxic polarization, and tackle every challenge we face, beginning with climate change.; To meet global challenges like climate change and reuniting our polarized democracy, America needs a bipartisan governing majority. We seem to be more divided than ever, our blue and red halves are taught to fear and hate each other, leaving us unable to meet any major challenge, from COVID and climate change to cultural warfare and the collapse of the middle class.; Americans, however, aren't nearly as divided as we seem. Over 7 out of 10 are common sense problem-solvers willing to join together to tackle any challenge. But inside our separated echo chambers, many Americans feel alone and politically disenfranchised in a world gone crazy.; IN THIS TOGETHER links together the politically disenfranchised of the left and right, in order to form the basis of what can become a common sense governing supermajority. First to tackle climate change, and in the process realize one of our highest aspirations, a healthy functional democracy.; Problem-solvers are a defined group of citizens, business and political leaders, and NGO advocates willing to reach across their divides to resolve conflicts and solve problems, and who resist the politics of demonization and endless cultural warfare.; The Citizen Data platform as well as the Core Strategic predictive model we developed enables us to identify, reach, and activate citizens who fit the profile of common sense problem-solvers. The models used by these two separate providers differ, but in essence they both identify voters who hold ideologically mixed positions on issues, have an optimistic outlook, believe they can make a difference, and prefer pragmatic problem-solving to ideological purity.; Our national database contains enriched data on over 150 million registered voters. Among these are the

subgroups we call Solution Citizens;; These 98 million are Americas silenced majority. The politically homeless that don't feel completely comfortable in one party and would never join the other one. The majority are silenced because the political strategists divide them into 2 separate media echo chambers each designed to block them from finding common purpose with their counterparts on the other side.; ; We can return governing power to the broad 70% of Americans if 5% of bridge that divide and bring Americas left and right back together to take on the challenge we face. Our reward can be a democracy that is real and solutions that work.; Every state and district has a large population of Solution Citizens. For example, in California's Orange County and Inland Empire - a critical battleground that could determine control of the House - we have identified 660,000 problem-solvers.; In 2022, In This Together will combine our data, modeling, deliberative polling, and messaging tools for the first time, to recruit and activate a 5% base of Solution Citizens in at least one major political battleground, to achieve three objectives;; In competitive races where typical winning margins are 2% or less, a 5% base of problem-solvers can break the tie and give a decisive advantage to candidates with solutions. Using the predictive model we will employ, the strategy has been successful in 14 of 19 races so far.; No. This is voter education, not electioneering. We will inform voters of which candidates have demonstrated they are problem-solvers, based on measurement tools by No Labels, Common Ground, and nonpartisan community leaders.; America in One Room (A1R), the largest-ever exercise in deliberative democracy funded by Donor Roundtable and Helena Foundation contributors, validated the two priorities of In This Together. It showed that democracy can work, and that a bipartisan supermajority for fact-based climate solutions is within reach.; Following the two paths charted by A1R, In This Together will connect strategic NGOs and citizens to launch two campaigns;; ; CLIMATE OF UNITY links nonpartisan environmental groups together in support of conservation, clean energy, and a price on carbon - policies supported by a strong bipartisan majority of informed Americans.; To drive bipartisan climate solutions with strong business and NGO support, the most important NGO coalitions will link The Nature Conservancy, Citizens Climate Lobby, Climate Leadership Council, Clear Path, Ducks Unlimited, Trout Unlimited, Conservative Energy Network, American Conservation Coalition, and EarthX Power of Ten.; THE SOCIAL SOLUTION links together strategic democracy reformers and civic problem-solvers to provide safe opportunities for red and blue Americans to solve problems together - bringing the "in one room" model for everyday Americans to apply.; To successfully shift political incentives and dollars from polarization to problem-solving, the most important NGO collaborations will link the ERB Institute at UMich, Bridge Alliance, BridgeUSA, Business for America, Listen First, AllSides.com, and Living Room Conversation.; Climate cannot be reliably protected without federal legislation in the U.S. backed by majorities of both Republicans and Democrats. Unfortunately, many leading environmental donors inadvertently turn both conservatives and progressives against necessary climate action.; For example, because the optics are less positive than for solar and wind, donors often fail to support advocacy of hydrogen, new generation nuclear, and carbon capture, use, and sequestration. This reduces support from conservative Republicans as well as centrists and moderate Democrats.; Because carbon pricing is cast as a tax to conservatives, as ineffective

and regressive to progressives, and as politically nonviable to both, many donors fail to fund carbon pricing NGOs. All three of these perceptions are flawed. Informed conservatives, progressives, economists, and scientists largely agree that carbon pricing is the most efficient and effective way to drive innovation to reduce carbon intensity. Structured as a revenue-neutral fee-and-dividend system, carbon prices benefit the poor, working, and middle classes more than the wealthy. Politically, this has helped grow an underlying bipartisan support base of lawmakers who privately favor carbon pricing and who will come forward when political cover is provided to protect them from extremists on the far right and left. Serious environmental donors need to understand that success is impossible without Republican support and progressive tolerance for market-based approaches. Republican support will be weak until these lawmakers have reason to believe they won't be "primaried." This requires an organized base of Republicans who support climate problem-solvers in competitive primaries. It also requires progressive Democrats to support carbon pricing systems like fee-and-dividend, which meet their criteria of equity.; We link together NGOs who bring complementary assets to the table - different skills, roles, and constituents such that, when combined, the whole is more effective than the sum of the parts. In this case, that means they can ensure bipartisan support for climate protection, including a broad range of options and a price on carbon.; Applying methods developed over 25 years at Future 500, we first inventory and map the stakeholders to a specific problem or issue. We link together those that complement each other, and fill gaps between them that prevent effective collaboration.; For example, to remove barriers to climate protection, it is important for major Republican donors to step up and support climate protection. To ensure bipartisan support for carbon pricing, it is important for progressive leaders to lend their active support.; Both these goals can be advanced by harnessing together selected assets of Citizens Climate Lobby and Climate Leadership Council. Both are dedicated to a fee-and-dividend carbon pricing policy. CCL has a magnificent grassroots base that includes many conservatives, but little inside-the-beltway influence. CLC has almost no grassroots base, but major beltway influence, and influential Republican donors.; Similarly, a number of inside-the-beltway groups support conservative and Republican-friendly climate solutions. But they do not take a position on carbon pricing. Their internal positions vary, and open advocacy could stress their existing allies. A Climate of Unity campaign can advance both their agendas: carbon pricing as supported by CCL and CLC, as well as conservative energy policy advocated by a broader NGO spectrum.; Online recruitment will be tested with segments of the 44.6 million problem-solver voters in 50 states identified by our national Citizen Data analysts. We will prioritize 10 battleground states and regions, in competitive primary and general election races, via digital advertising, social media posts, YouTube videos, online petitions, text messages, and a phone bank.; Our first on-the-ground campaign will be in California's Orange County and Inland Empire, now a key battleground split 50-50 between red and blue voters. More than \$100 million may flow into the region to accentuate and heighten mutual fear and animosity between the tribes. Then campaign strategists will battle to get their most outraged voters to the polls.; We will strategically disrupt the effectiveness of polarization by activating a base of 100,000 in between the outraged left and right. Comprising 5% of voters, these

common sense problem-solvers will have the power to break the tie and elect the better problem-solver among the candidates. Our objective is not to elect any particular candidate, but to create an electoral incentive for all major candidates to be problem-solvers.; Voters will commit to vote only for common sense candidates who are proven problem-solvers as defined above. This ensures that Common Sense Republicans and Democrats have something in common.; To assess our impact, we plan to partner with a leading civic health organization to measure polarization before and after the campaign. But the most important indicator of success will be if all candidates in competitive races compete for problem-solver votes, or if in contests with polarizers, problem-solvers gain the advantage.; Success is a "yes" answer to most of these questions;; Subscribe today to receive our weekly newsletter 'In Between Times' as well as the occasional organizational communications.; In This Together is a campaign by the Bridge Foundation for Free Speech and Civil Discourse (a registered 501(c)(3) EIN 82-4775384) and Solution Citizen, Inc. (a mission-based C-Corp, EIN 85-1217899) to unite citizens, donors, and NGOs for healthy democratic problem-solving. We partner with and support BridgeUSA (a registered 501(c)(3) EIN 82-3983123) and other NGOs to foster collaboration for a healthy democracy and environment.; Our Privacy Policy; (C) 2020 All rights reservedâ€œ
